

PROFILE

My primary research interests encompass aerosol-radiation, aerosol-cloud and aerosol-cryosphere interactions, through the application of ground and satellite-based measurements and model simulations.

Currently, I am involved in evolving accurate regional characterization of aerosols over the SOUTH ASIAN & POLAR REGIONS to assess the impact on regional and global climate. Towards this, I am instrumental in operating a national network of Aerosol observatories (ARFINET) over India, generating primary aerosol data for research and societal applications.

I am also responsible for the commissioning and operationalization of aerosol laboratories in the pristine ARCTIC, ANTARCTIC & HIGH-ALTITUDE HIMALAYAS, for studying snow darkening and glacier melt due to aerosols.

I have DESIGNED & EXECUTED several MULTI-PLATFORM FIELD EXPERIMENTS on-board SHIP & AIRCRAFTS to study the impact of aerosols on radiations and clouds at distinct environments.

DR MUKUNDA M GOGOI

SCIENTIST-SF

PROJECTS

ARFI project of ISRO-GBP Co-Principal Investigator

Aims at the accurate estimates of aerosol radiative forcing over India. The ARFINET is designed to make comprehensive measurements of all the aerosol parameters needed for climate impact assessment.

ARCTIC Project Principal Investigator

Aims at characterizing the source processes and climate impacts of Polar aerosols based on continuous long-term observations and dedicated field experiments at Ny-Ålesund in Svalbard archipelago.

GOSAT-RA Project Principal Investigator

A joint effort for the generation of gridded aerosol data sets over India by utilizing improved data assimilation techniques based on GOSAT-2 retrievals and ARFINET measurements.

RAWEX Scientific Investigator

Focuses on the quantification of regional atmospheric warming by elevated absorbing aerosols over the Indian region.

ICARB Scientific Investigator

An integrated approach to quantify the spatio-temporal heterogeneity of aerosols over India and the adjoining oceans.

Integrated Polar research program of SPL

Extensive scientific observations on aerosol parameters and snow albedo measurements at the last frontiers.

WORK EXPERIENCE

SCIENTIFIC EXPEDITIONS TO ARCTIC

Representing India, participated in the Scientific Expeditions to Arctic during Spring-2012, Summer-2013, Autumn-2014 (Team Leader) and Autumn-2015; opened up new collaboration and scientific understanding on aerosol-cryosphere interaction.

SHIP BORNE EXPERIMENTS

Conducted ship-borne experiments in the northern Indian Ocean during Jan-Feb, 2018.

AIR BORNE EXPERIMENTS

Conducted extensive air-borne experiments of aerosols on-board instrumented-aircraft over distinct regions of India during 2012, 2013 and 2016.

HIMALAYAN EXPERIMENTS

Established a chain of aerosol observatories over the Himalayas for the continuous monitoring of free-tropospheric aerosols.

R&D IN SCIENCE AND TECHNOLOGY

RECOGNITIONS/ AWARDS

GOSAT-RA PI

- Selected for joint research collaboration with JAXA and NIES, Japan (2019-2021)

GOLD MEDAL FOR YOUNG SCIENTIST

- INTROMET-2014

BEST ARTICLE AWARD

- 'आर्कटिक मे भारत',
गगन, Vol-47, 2019
- Terrestrial Atmospheric and
Oceanic (TAO) Sciences,
Vol-20, No 3, 2009

BEST PAPER AWARDS

- URSI-2020
- NCPS-2019
- NSSS-2016
- IASTA-2016
- NSSS-2012

ACADEMIC

Ph.D. Supervision – 02
M. Phil. Projects – 03
M. Sc. Projects – 06

QUALIFICATION

2008 Post-Doctoral Fellow, SPL
2007 Ph.D., Dibrugarh University, Assam
2001 M.Sc., Dibrugarh University (DU)
1998 B.Sc., J.B. College, DU

2011 Hindi Praveen
1997 Diploma in Computer Tech.

POSITIONS

- Scientist**, SPL, VSSC
Since Sep 2008
- Research Associate**, SPL, VSSC
Dec 2007 – Sep 2008
- Research Fellow (ISRO-GBP)**
Sep 2002 – Aug 2006

Indian Aerosol Science & Technology Association

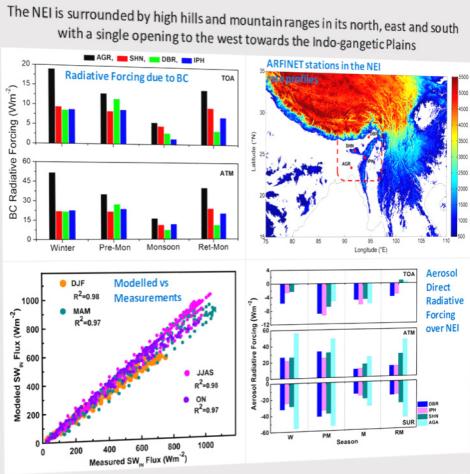

Being a multi-parameter problem with large heterogeneities in space, time, and spectral domain aerosol characterization needs a sustained, region specific and synergistic approach. In this context, my scientific research is inclined to the integration of multi-platform measurements with satellite remote sensing and model simulations to address specific science problems pertinent to (i) regional aerosol direct radiative forcing, (ii) snow darkening due to light absorbing aerosols and snow albedo forcing and (iii) continental impact of aerosols on far oceanic and polar regions, in addition to understanding aerosol microphysics, life cycles and CCN characteristics.

SCIENTIFIC COLLABORATION

PUBLICATIONS (PEER-REVIEWED INTERNATIONAL JOURNALS)

RESEARCH HIGHLIGHTS

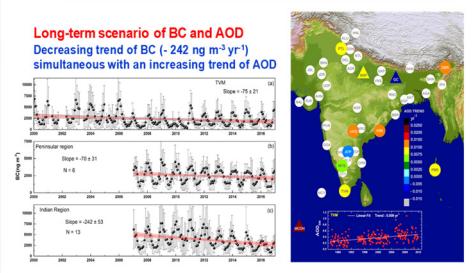

Over north-eastern India (NEI), for the first time, regional synthesis of spectral aerosol absorption, supplemented with fire count and fire radiative power from MODIS, UV-aerosol index and aerosol layer height from OMI reveals higher radiative impact due to fossil fuel-based BC over the western part against the biomass burning dominance in the eastern part.

The abundant BC (10-15%) in the region is responsible for surface dimming by $-26.14 \text{ Wm}^{-2}\text{T}^{-1}$ (nearly $\frac{1}{4}$ of the radiation absorption in the atmosphere) having a potential atmospheric forcing of $+43.04 \text{ Wm}^{-2}\text{T}^{-1}$.

Satellite retrieved direct radiative forcing highlights the west to east gradient of aerosol distribution within the NEI.

Statistically significant and consistent increasing **trend in aerosol optical depth** over India has been revealed from the analysis of long-term data (back to ~ 25 years at some stations) from the ARFINET, indicating a faster increase in the sub-micron anthropogenic component of the total aerosol system.

First time regional synthesis of Black Carbon aerosols revealed surprising observation of **decreasing trend in the near surface BC** concentration. This finding contrasts with the generally increasing trend in the columnar AOD, and the steadily increasing trend in anthropogenic activities over this region. These observations imply possible long-term climate consequences.

Just prior to the onset of monsoon, **vertical profiles of aerosol size distribution and BC absorption** shows region specific characteristics over India, leading to a decreasing trend in the vertical structure of single scattering albedo (SSA) from west to east of IGP.

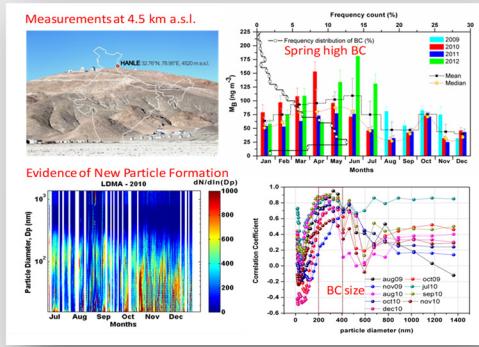

Biomass burning and dust aerosols contribute up to lower free tropospheric altitude in spring and a decrease in aerosol concentration from winter to spring within ABL. Columnar AAOD shows weak seasonal variations despite being prominent in case of BC mass concentrations.

<https://doi.org/10.1007/s12040-019-1246-y>

Vertical distributions of the microscopic **morphological characteristics** and elemental composition of aerosols over India reveals the dominance of non-spherical coarse mode particles (> 90%) in the lower free tropospheric regions of the Indo-Gangetic Plains. These particles could be responsible for enhanced aerosol absorption in the elevated region of the atmosphere during spring.

Over the **Himalayas**, highest values of BC in the trans-Himalayan site Hanle (4.5 km asl) highlighted the influence of advection. Size range of BC have been estimated in the typical range of 200-400 nm.

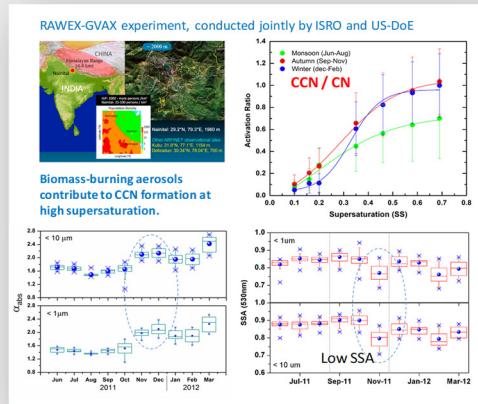

The region also depicted strong signatures of **new particle formation** with a strong solar control on the processes.

Dominance of mineral dust aerosols (~67%), along with BC (~4% to total aerosol mass) is quantified over the western Himalayas, inferring far reaching implications on regional radiative balance and impact on snow/glacier coverage.

Cloud Condensation Nuclei (CCN) at a central Himalayan site reveals higher CCN activity during late autumn due to the contribution of biomass burning aerosols, indicating the influence of seasonal changes in aerosol composition.

Altitude profiles of CCN characteristics across the IGP, just prior to the onset of the Indian summer monsoon (ISM) of 2016, indicated highest CCN activation efficiency over the eastern IGP (~72%), despite highest CCN concentrations in the Central IGP above the planetary boundary layer (PBL).

CHAPTER IN BOOK

Over the marine environment, CCN properties and activation fraction showed the impact of size segregated aerosol number concentration, especially the ultrafine particle events, over the northern **Indian Ocean** (NIO).

Aerosol measurements over the equatorial Indian Ocean (EIO) showed significantly higher values of BC mass fraction (FBC~ 3.7%), indicating the continental anthropogenic influence even at the far oceanic region during dry winter.

Several NPF events with conspicuous bimodal size distributions and 3–10 times enhancement in nucleation particle (<25 nm) concentrations were noticed over the southeastern Arabian Sea, NIO and EIO. NPF occurred more frequently over the remote oceanic EIO, but more intensely over the regions in the continental proximity demonstrating the varying precursor vapor source strengths.

Aerosol measurements carried out from the Indian polar stations at **Arctic and Antarctic** have revealed higher BC in Arctic snow than that at the Antarctica. Concurrent with this, the scavenging ratio of BC showed large variability over both the poles, indicating difference in removal mechanisms of BC from the atmosphere.

Measured and model simulated albedo indicated the role of dust absorption, in addition to that of BC, in changing the snow albedo properties in the Arctic.

Airborne BC over the Svalbard region of Norwegian Arctic have revealed a consistent springtime time enhancement (nearly 3-times higher than the lowest BC concentrations in summer); delineating more than 25% of this enhancement to the long range transported biomass burning aerosols.

The study on recent **trend in global aerosol direct radiative forcing** from satellite measurements is unique in order to understand the broad consequences of aerosols in the Earth's climate system. This study revealed a general decreasing trend (i.e., a reduced cooling effect) at the top of the atmosphere and at the surface with rapid change over the land compared to the global ocean. South Asia and Africa/Middle East regions depict significant increasing trend of atmospheric warming, whereas the rest of the regions show a decline.

TRAININGS/ WORKSHOPS

- Structured Training Programme on 'New Trends in Remote Sensing and GIS Application: Global Perspective and Indian Scenario', Indian Institute of Remote Sensing, Dehradun, May 27-31, 2019.
- 'Presentation Skills', HRDD, VSSC, July 05, 2019.
- 'Big Data Analytics', HRDD, VSSC, 09-11 October, 2018.
- 'Aethalometer Inter-comparison Experiment, Indian Institute of Science, Bangalore, 01-15 April, 2017, *Program Coordinator*
- 'MySQL', HRDD, VSSC, 17 & 18 August, 2017.
- 'JAVA', HRDD, VSSC, 20-22 Dec, 2016.
- 'Secure Web Design', HRDD, VSSC, 8-10 Sep, 2015.
- 'AJAX and J-Query', HRDD, VSSC, 5-6 Sep, 2013.
- 'Geoinformatics for Meteorology and climatology Applications', Sponsored by Indian Meteorological Society Dehradun Chapter & Indian Institute of remote Sensing, ISRO, Dehradun, November 18-29, 2013.
- 'Bhuvan One-day workshop', Thiruvananthapuram, 19 March 2012.
- 18th ISRO Induction Training Program (IITP), 10 Oct – 3 Dec, 2008.
- DST sponsored workshop on "Sensors for Agricultural and Industrial Applications", Department of Physics, DU, 20 Sep-1 Oct, 2004.
- The short-term course on "Physics of atmosphere and Oceans", Indian Institute of Science, Bangalore, 1-12 July, 2002

GENERAL ACTIVITIES/ OUTREACH

- Co-chair: Technical session on "Aerosol-cloud-precipitation interactions" in the Tropmet-2020, the virtual National Symposium on "Weather and Climate Services over Mountainous Regions", NESAC, Shillong, during 14-17 December, 2020.
- Co-Chair, Editorial committee, 'SPL Golden Jubilee Souvenir', 2019.
- Evaluator, 27th National Children Science Congress (NCSC-2019), Thiruvananthapuram, December 27-31, 2019.

- Convener, Resource Material Committee, World Space Week-2018, Vikram Sarabhai Space Centre, Trivandrum
- Convener, Session-AS-06 'Spatial and temporal variability of aerosol in and around Indian sub-continent and the associated radiative forcing - a study from in-situ and satellite derived data', Asia Oceania Geosciences Society (AOGS), Singapore, 2017.
- Editor, Scientific Progress Report, ARFI & ICARB, 2010, 2012.
- Member, Website management committee, National Space Science Symposium (NSSS), VSSC, Thiruvananthapuram, 09-12 February, 2016.
- Member, Design and development of SPL website, 2013-2017.
- Editor, Scientific Progress Report: ARFI, ICARB, RAWEX & NOBLE, 2014.
- Member, Editorial Committee, 'NaWRoSE Proceedings', 2011.
- Member, Doctoral Committee of SPL.
- Member, Editorial Committee, 'SPL Annual Report', since 2010.
