## Specific Scientific/Technical contributions

- In the capacity of Co-Principal Investigator of NOBLE (Network of Boundary Layer Experiments) project, I played a pivotal role in the identification of network stations, co-investigators and suitable experimental sites. Extensively involved in the setting up of the boundary layer instruments, day to day functioning, development of algorithms for scientific data analysis and archiving the data recorded from all network stations. Presently 08 operational stations at different geographical locations like coastal, complex terrains and semi-arid regions of India. In addition, I contributed significantly in the field of precipitation studies both inland and coastal regions using ground-based instruments and radars. Quantified and established i) Reflectivity (Z) -rainrate (R) relationship ii) rain Drop size distribution (DSD) parameters and iii) gamma distribution parameters for three different seasons over coastal region Thumba.
